You have rolled over and died. Microsoft has beaten you with a shape stick. You will probably never see this email. Microsoft is the worst company in the world and the DOJ wants to let them off with a slap on the wrist? Search your history: 1955 Consent Decree between IBM and DOJ. IBM was broken into 3 groups at least and not allowed to disparage or unhook. In 1999 they got you DOJ to recind the CD. Do the same thing to Microsoft. Don t allow them to have IE an integral part of the OS. Separate the OS from the applications. Tell them to play by the rules or cease and disist. No more bulling of small companies. DOJ should have started from the position of putting Microsoft out of business. They are not the All American firm they want you to believe. They are ruthless and destructive and destroy every thing and every one in their way. Rant and Rave. I just got a phone call from an organization the called itself Americans for Technology Leadership. It s a front for Microsoft. Someone called and I told him my point and he hung up the phone. No guts. Wanna play hardball. So far DOJ has played softball. Don t send me an automatic response. McWalters
